

# BIG DATA BEYOND THE BASICS.

Big Data is an umbrella term for any collection of data sets so large and complex that it becomes difficult to process them using traditional data processing application & database structures.

Unitas provides big data solutions to simplify your IT complexities. The challenges include analysis, capture, curation, discover, search, sharing, storage, transfer, visualization, and privacy & security compliance. Explore our offerings and methodology.

## HIGHLIGHTS

- PLAN**  
 Unitas can help you understand the technological tradeoffs and decision points, and put together an achievable plan that will impact your business.
- DEVELOP**  
 Unitas' expertise building platforms in multiple industries can ensure successful development of your big data systems.
- INTEGRATE**  
 Unitas can work with your IT team to integrate key systems with your big data system, in a timely and cost effective manner.
- OPERATE**  
 Unitas' managed services can handle all of your operations needs, or ease your transition into Big Data operations.

### SOLUTIONS

**BIG DATA STRATEGY**  
 With Unitas, strategy projects are designed to set the correct business and technology course, and scope of the initiative.

**BIG DATA PLATFORM**  
 Enterprise big data operates as a fully managed service or as augmentation to existing operations.

**BIG DATA OPERATIONS**  
 The big data platform allows architecture and pipeline implementation across multiple technology stacks.
