

GLOBAL CLOUD ACCESS SOLUTION

Providing reliable, secure, and flexible cloud connectivity solutions to achieve optimal hybrid and multi-cloud performance

The Problem

While network last mile accounts for 68% of network cost, 82% of downtime, and 99% of the complexity in today's modern network designs, it is often overlooked as part of overall enterprise cloud strategy. Today's organizational IT environments are becoming increasingly more distributed in a mix of owned and cloud provider data centers to take advantage of the rich ecosystems in network and cloud. As mission critical applications become more heavily reliant on public clouds' unique capabilities, network & access connectivity become more important to the success of your business.

Enter the Unitas Global Managed Access Solution

Unitas Global's global cloud access solution is transformative, simplifying fully managed, end-to-end access connectivity from premise to data center to cloud.

RELIABLE LOCAL CONNECTIVITY TO ANY CLOUD OR DATA CENTER

FULLY MANAGED & PROVISIONED, BACKED BY ONE MSA & SLA

AUTOMATED DESIGN & QUOTE FROM +9M LOCATIONS

The powerful combination of managed network, interconnected network infrastructure, and automated intelligence to build software-defined networks offers visibility and control, extends reach, and accelerates enterprise cloud adoption.
